Solutions for Today's Industry**

Commercial Vehicle Turntables

Rotair Systems is a leading supplier of commercial vehicle turntables in the UK, and can call on many years experience in both design and installation stages. Whether it is for rotating cars, commercial vans, articulated trucks or production equipment, make sure you talk to the support staff at Rotair.

With the ever increasing demand on space in our cities and towns, we see the need for tighter parking and far less turning room for heavy goods vehicles. So much so that architects and designers are automatically including commercial vehicle turntable installation into many of their designs for such places as supermarkets and underground loading facilities.

There is now a requirement for well proven and economically priced turntables, whether they operate by floating on a film of air or are rotated by more conventional means such as castors. Rotair Systems are fully experienced in all aspects of commercial turntable design, from a smaller turntable for standard vehicles to the larger models to accommodate today's large articulated vehicles.

Rotair Systems' air film turntables are of a very versatile modular design, allowing them to be installed in confined areas inside or outside, flush or surface mounted.

Because of their low profile - 150mm or less - and low ground pressure requirements, it is possible to install these turntables within a mezzanine floor or thin slab section where wheeled turntables would be impossible to fit.

Here are some of the features and benefits of a Rotair Systems commercial vehicle turntable:

- Unique design with economical pricing.
- Reliable—very few moving parts.
- Models available for all HGV size vehicles
- Fully experienced installation team
- Rotair's excellent backup service & support.
